

ANALYSIS OF THE IMPACTS OF THE ACA'S TAX ON HEALTH INSURANCE IN YEAR 2020 AND LATER

CHRIS CARLSON, FSA, MAAA GLENN GIESE, FSA, MAAA THOMAS SAUDER, ASA, MAAA

AUGUST 28, 2018

REPORT QUALIFICATIONS/ASSUMPTIONS AND LIMITING CONDITIONS

Oliver Wyman was commissioned by UnitedHealth Group to analyze the impact of the ACA's tax on health insurance premiums. The primary audience for this report includes health insurers that are responsible for paying the tax on health insurance premiums and other interested parties.

Oliver Wyman shall not have any liability to any third party in respect of this report or any actions taken or decisions made as a consequence of the results, advice or recommendations set forth herein.

The opinions expressed herein are valid only for the purpose stated herein and as of the date hereof. Information furnished by others, upon which all or portions of this report are based, is believed to be reliable but has not been verified. No warranty is given as to the accuracy of such information. Public information and industry and statistical data are from sources Oliver Wyman deems to be reliable; however, Oliver Wyman makes no representation as to the accuracy or completeness of such information and has accepted the information without further verification. No responsibility is taken for changes in market conditions or laws or regulations and no obligation is assumed to revise this report to reflect changes, events or conditions, which occur subsequent to the date hereof.

While this analysis complies with applicable Actuarial Standards of Practice, users of this analysis should recognize that our projections involve estimates of future events, and are subject to economic and statistical variations from expected values.

Executive Summary

Section 9010 of the Patient Protection and Affordable Care Act (Pub L. 111-148) and the Health Care and Education Reconciliation Act (Pub L. 111-152), collectively "the ACA," imposes fees on insurance companies that offer fully-insured health insurance coverage. The fees, which are treated as taxes under the Internal Revenue Code, are assessed on earned health insurance premiums, with certain exclusions.

In January 2018, Congress passed H.R. 195, Division D – Suspension of Certain Health-Related Taxes, which created a one-year moratorium on collecting the insurer taxes for 2019. The fee that would have been due in 2019 will not be collected and, because of the moratorium policyholders are projected to save 2.2% of premiums.¹ However, under current law the moratorium will lapse in 2020 and the tax on health insurance will be reinstated for 2020 at a higher annual level (an estimated \$16.0 billion), resulting in higher fully-insured premiums for the 2020 plan year and all future years.

The taxes on health insurance are non-deductible for federal tax purposes for health insurers. Therefore, for each dollar assessed and paid in taxes, more than a dollar in additional premiums must be collected (e.g. \$1.27 for every \$1.00 in taxes, assuming a 21% federal corporate income tax rate)² yielding a total premium impact in 2020 of as much as \$20.3 billion. In total, the amount assessed and collected is projected to be over \$260 billion over the ten-year period of 2020 to 2029.

This report provides an analysis of the impact of the tax on health insurance premiums beginning in 2020. In addition, we provide the allocation of these taxes across each state and line of business and describe the number of individuals whose coverage is impacted by the tax on health insurance.

In summary, we estimate that the tax on health insurance will increase premiums by 2.2% in 2020 and in subsequent years when the amounts collected in taxes is mandated to increase at the same level as premium growth. In 2020, this amount equates to \$196 per individual in the non-group market, \$154 per single contract and \$479 per family contract in the small group market, \$158 per single contract and \$458 per family contract in the large group market, \$241 per Medicare Advantage member (including Special Needs Plans and Employer Group Waiver Plans), and \$157 per Medicaid managed care enrollee. Over the next ten years, this amount equates to \$2,473 per individual in the non-group market, \$1,873 per single contract and \$5,824 per family contract in the small group market, \$1,921 per single contract and \$5,558 per family contract in the large group market, \$3,052 per Medicare Advantage member, and \$1,988 per Medicaid managed care enrollee. Furthermore, we estimate that about 142 million consumers and/or their plan sponsors (in the case of Medicaid and subsidized exchange plans) could be impacted by the tax on health insurance.

¹ Oliver Wyman's most recent report on the health insurer taxes issued on October 10, 2017 estimated that the taxes would increase premiums by 2.7%. We note that the decrease in the impact of the taxes is almost exclusively due to the reduction in the corporate tax rate.

 $^{^{2}}$ \$1.00 = \$1.27 x (1.00 - 0.21)

The taxes apply to all fully-insured coverage, including the on-exchange and off-exchange individual market, large and small group markets, and any insured public programs including Medicare Advantage, Medicare Part D, and Medicaid Managed Care. The increased cost of health insurance leads to many negative outcomes, including:

- Increasing costs facing the Medicare Advantage and Medicare Part D programs that could result in increased cost-sharing and premiums for Medicare Advantage and Medicare Part D enrollees.
- Increasing the tax burden on small employers that are fully-insured, unlike self-insured public and private employers that are not required to pay the tax on health insurance.
- Increasing costs for States and States' taxpayers to pay the tax costs for Medicaid Managed Care enrollees.
- Increasing the cost of fully-insured health care coverage, resulting in individuals and groups delaying purchase of health insurance and increasing the number of uninsured individuals.
- Potentially exacerbating "adverse selection" in the individual and small group markets as younger, healthier individuals forego coverage leading to a less stable risk pool and higher premiums.

The opinions and conclusions expressed herein reflect technical assessments and analyses, and do not reflect statements or views with respect to public policy.

2. Data

The health insurance taxes discussed in this report are allocated to each insurer based on their applicable net premiums for health insurance, but during the year prior to the year the taxes are due. The 2020 taxes will be allocated based on 2019 net premiums. The portion of the tax to be paid by each insurer will be based on the proportion of each insurer's premiums to total premiums for all covered entities (referred to here as the "denominator"). To determine the applicable tax to be paid by each insurer relative to their premiums, we need to calculate the total premiums for entities that will be charged the taxes.

There are three main components in developing the net premiums to be used as the denominator in our analysis. The first component is an estimation of current health insurance premiums that would be eligible to be assessed the insurer taxes. The next component is the expected increase in per capita costs due to such factors as the underlying health care trend, benefit changes either required by the ACA or resulting from the general course of business, and changes in the demographics of the insured population. The final component is the expected change in enrollment counts.

Base Premiums

Insurance companies are required to file annual financial statements with the applicable state regulatory agencies. Most of these data are publicly available and represent the experience for insurers during the preceding calendar year. We accumulated all the available financial statement data for their 2017 experience. There are some states that do not require public disclosure of financial statements for certain plans (e.g., Medicaid managed care plans). Therefore, we relied on data from the IRS for companies that did not appear in the accumulated financial statement data. Table 1 below shows the total health insurance premiums from the five sources of data we used.

Table 1
Aggregate Health Premiums for 2017 by Source

Source of Premium Data	Health Insurance Premiums (000s)
Health Insurance Financial Statements (Orange Blanks)	\$683,930,450
Life, Accident and Health Financial Statements (Blue Blanks)	175,148,620
Property and Casualty Financial Statements (Green Blanks)	3,783,375
California Data (Knox-Keene)	164,717,299
IRS Form 8963 Database	9,803,772
Total Gross Premiums	\$1,037,383,515

Additionally, we collected data at the state and coverage type level using information from the National Association of Insurance Commissioners' (NAIC) supplemental exhibits, which include the Accident and Health Policy Experience Exhibit and the Supplemental Health Care Exhibits (SHCE). The SHCE were required beginning in 2012 and are used to calculate the medical loss ratios for individual, small group and large group plans.

We accumulated the data by identifying all companies that had health insurance premiums during 2017 and pulled the earned premiums by line of business for every state and US territory from the supplemental exhibits. Where the supplemental exhibits are not completed, we used the direct written premiums by state from Schedule T of the NAIC Financial Statement to allocate experience for all lines of business by state.

The insurer taxes are allocated based on net premiums subject to certain exclusions. Using the accident and health supplemental exhibits from insurers' financial statements, we estimated the amount of the exclusions for the health products that are not subject to the insurer taxes. These exclusions include amounts for hospital indemnity type plans, critical illness, long- and short-term disability, Medicare supplement and long-term care. Association health plans (AHPs) and short-term limited-duration (STLD) policies will be subject to the taxes and are considered in our report.

Section 9010(c)(2)(C) of the ACA provides for an insurer tax exclusion for all companies that meet four criteria. First, they must be incorporated as a non-profit corporation under state law; second, no part of net earnings may inure to any private shareholder or individual; third, no substantial part of the entity's activities may be engaging in lobbying or political campaigns; and fourth, more than 80 percent of gross revenues must be received from government programs that target low-income, elderly or disabled participants under Titles XVIII, XIX and XXI of the Social Security Act. We have removed all companies that satisfy these requirements from our analysis.

In comparing the NAIC data and the preliminary IRS data that was reported in 2018, we found that the IRS data reported premiums for certain companies that we were unable to locate from our sources. In these cases, we relied on the data from the IRS. Note that we relied on preliminary IRS data because final data for 2018 is not available.

Further, for each company, all premiums up to \$25 million are excluded from the insurer tax calculations, and premiums from \$25 million to \$50 million are reduced by one-half. Finally, premiums for tax-exempt companies are further reduced by one-half. Our analysis compiles information for each company, thus we modeled the exclusions on a company-by-company basis. Table 2 shows the calculation of the premiums based on 2018 data reflecting exclusions.

Table 2
Excluded Premiums and Denominator Based on 2017 Premiums

Premium by Tiers	Premium Excluded (000s)
Total Gross Premium	\$1,037,383,515
Premium for Lines of Business Not Subject to Insurer Fee	121,224,027
Net Premium	\$916,159,488
Excluded under Section 9010 (c)(2)(C)	91,874,116
Net Premiums After Exclusion	\$824,285,372
\$0 to \$25 million	7,421,842
\$25 to \$50 million	3,100,103
Net Premiums After Tiers	\$813,763,428
Premium for Tax Exempt	67,993,821
Total Net Premiums (Denominator)	\$745,769,606

Our modeling assumes that the tiered exclusions of premiums up to \$50 million will be based on consolidated groups. Companies are assigned to a group based on the group assignments in the IRS data.

The IRS rules describe the applicability of the exclusion for tax exempt organizations.³ Per the regulations, the exclusion for tax exempt companies is applied at the member level, thus if the member of a consolidated group is tax exempt, it will benefit from the 50% exemption, even if the consolidated group is not entirely tax exempt.

We used the supplemental exhibits from the financial statements to identify the net premiums by line of business, splitting premiums into individual, small group, large group, FEHBP, Medicare Advantage and Part D, and Medicaid. In total, this method generated net premiums of \$824 billion in 2017 that are subject to the tax. We further reduced applicable premium base to \$746 billion after allowable exclusions. Table 3 shows the results of our analysis split by line of business and tax status.

Table 3

Denominator Premiums by Line of Business for 2017

	Applicable Premiums	Excluded	Net Premiums (Denominator)
Line of Business	(000s)	Premium (000s)	(000s)
Individual	\$82,874,490	\$8,097,862	\$74,776,628
Small Group	87,523,367	8,859,094	78,664,273
Large Group	249,805,898	35,707,458	214,098,441
FEHBP	13,162,393	1,269,697	11,892,696
Medicare Advantage	204,429,324	16,858,935	187,570,389
Medicaid	170,597,883	7,480,279	163,117,605
Medicare PDP	15,892,018	242,442	15,649,576
Total	\$824,285,372	\$78,515,766	\$745,769,606

Table 3 shows the base premiums for 2017. To assess the 2020 fee impact, we project the premiums to 2019 and later to determine the estimated premiums that will be considered in the calculation of the insurer taxes for 2020 and subsequent years. Below we describe the assumptions used in our projections.

Per Capita Costs

The projection of the premium rates required us to estimate changes to the cost to provide health care between 2017 and 2019, and later. We compiled data from public sources that estimate the changes in the per capita costs by line of business. Below we list the basis of these assumptions:

• Individual – To project from 2017 to 2018, premium rate increases are based on average premiums from CMS's effectuated enrollment report published July 2nd, 2018, coupled with an adjustment for premiums which are not loaded for the lack of federal funding for cost share reductions (CSRs).^{4,5} To project from 2018 to 2019, the premium rate increases are based on a combination of reports to account for the impact of removal of the individual mandate penalty, reinstatement of STLD plans, and AHPs.^{6,7,8,9} For 2020 and later years, premium rate increases are based on data from the National Health Expenditures.¹⁰

- Medicaid Based on data from the National Health Expenditures.¹⁷

Enrollment Estimates

The next step in establishing the premiums in 2019 and later years is to estimate the changes in enrollment by line of business. Again, our assumptions for enrollment come from public sources, as described below:

- Individual To project from 2017 to 2018, enrollment is based on CMS's effectuated enrollment report adjusted for off-exchange members not receiving CSR loads.¹⁸ To project from 2018 to 2019, enrollment is based on a combination of reports to account for the impact of removal of the individual mandate penalty, STLD plans, and AHPs.^{19, 20, 21, 22} For 2020 and later, enrollment is based on data from the National Health Expenditures.²³
- Small Group Based on data from the National Health Expenditures and adjusted for impacts of AHPs. ^{24, 25}

3. Results

Using the assumptions described above, we projected the gross premiums forward to each year from 2020 to 2029 and apply the applicable exclusions to determine net premiums. Additionally, the projected annual change in gross premiums are applied to the insurer fee for 2019 forward, as the statutory fixed fee ends in 2018.²⁹ Next, we calculated the ratio of the insurer taxes to the projected net premiums. Finally, we grossed up the ratio to reflect the non-deductibility of the taxes by assuming an effective 21% overall federal tax rate, reflecting the federal statutory rate for corporate income tax. This implies that for each dollar paid in taxes, an additional \$1.27 in premiums must be collected.

Table 6
Estimated Increase in Health Insurance Premiums Due to Section 9010 Taxes

	Percent
Year	Increase
2020	2.2%
2021	2.2%
2022	2.2%
2023	2.2%
2024	2.2%
2025	2.2%
2026	2.2%
2027	2.2%
2028	2.2%
2029	2.2%

Table 6 represents the increase in average premium rates by year that will be needed to fund the payments that insurers will be required to make to support the taxes imposed on them.

Per Capita Increase in Premiums

Using the amounts in Table 6, we applied these increases on a per capita basis to the premiums in each market. Table 7 shows the projected per capita premium increase for the next ten years by line of business.

²⁹ https://www.irs.gov/businesses/corporations/affordable-care-act-provision-9010

Consumers in Plans Impacted by the Tax on Health Insurance

We estimated that about 142 million consumers are in fully-insured plans that could be impacted by the tax on health insurance. The Congressional Budget Office has stated previously that consumers would pay the health insurers tax as it would be passed through in the form of higher premiums.³⁰ This means that consumers who purchase individual coverage, receive it from their employer, or enroll in a Medicare Advantage plan or Medicare PDP are paying for the health insurance tax. For individuals covered by exchange subsidies and Medicaid, the government pays the tax on their behalf. Table 9 shows the number of fully-insured consumers, by line of business, who are in plans that could be impacted by the tax on health insurance in 2020.

³⁰ https://www.cbo.gov/sites/default/files/111th-congress-2009-2010/reports/11-30-premiums.pdf

Table 9
Estimated Consumers in Plans That Could Be Impacted by the Health Insurance Tax in 2020

Line of Business	Consumers in Fully- Insured Plans
Individual	17,400,000
Small Group	14,300,000
Large Group	35,800,000
Medicare Advantage	20,900,000
Medicare PDP	25,700,000
Medicaid Managed Care	27,700,000
Total	141,800,000

4. State Specific Results

Using the financial statement data, we split the premium data further into state specific data. Therefore, we have calculated for each state and line of business, the additional premiums that will be paid in 2020 in aggregate, and per capita. The detailed data are shown in Tables 10-13 below.

Table 10
Additional Premiums to Be Paid as a Result of Section 9010 Taxes in 2020 (\$000s)³¹
